Replace your Google Search Appliance (GSA) with Elasticsearch

A Future-proof Migration Path from BA Insight

Replacing your GSA? BA Insight's approach provides unparalleled search capabilities, a future-proof path with flexibility and choice, and a smooth transition. You can tackle the most demanding search applications both now and in the future, and never look back.

Future-Proof with Elasticsearch

Elasticsearch (open source) gives you ultimate control over your future. Google and many other search vendors have changed direction or have been acquired, leaving customers stranded. But with open source, you will always be able to continue, independent of any vendor.

Complete Enterprise Search Solution

BA Insight's Software Portfolio adds onto Elasticsearch and SharePoint or SharePoint Online to provide a complete enterprise search solution. You can use an Open Source search engine along with industrial-strength connectors and commercial-grade support, without having to write custom code.

Choice and Flexibility

BA Insight supports cloud-based, on-premise, and hybrid configurations; desktop, mobile, and tablet devices; and multiple search engines including Elasticsearch and SharePoint. You can choose what you need now and have the flexibility to change and grow in the future.

Unparalleled Search Capabilities

We do much more than just match your current GSA capabilities. BA Insight and Elasticsearch provide better search capabilities than the GSA in every aspect and provide a solid go-forward roadmap on the most widely used search technology.

Smooth Transition

Our approach provides a smooth transition from the GSA. You can even run the GSA concurrently with Elasticsearch and/or SharePoint search if you'd like, making cutovers seamless and fail-back invisible to users.

The End of the Yellow Box

The Google Search Appliance has been discontinued, with new hardware sales already over and no support beyond March of 2019. Google Cloud Search (formerly known as Springboard) is not a replacement – it's focused only on search within G Suite.

BA Insight GSA Replacement Program

Ensuring a Smooth Transition

- Free 30 day proof-of-concept
- Implementation fee waived
- First month of subscription fee waived
- Additional discount on the BAI software portfolio

Turn Elasticsearch into a Complete Enterprise-wide Search Solution

BA Insight products add on to Elasticsearch to provide a wide rage of essential capabilities for enterprise-wide search: secure, high-performance **Connectors** to over 60 enterprise systems, **AutoClassification** that adds consistent structure across all content automatically, **Applications** that present information in intuitive experiences, and **Analytics** to use data about user behavior to improve the overall system.

Turn Elasticsearch into a Complete Enterprise-wide Search Solution

Integrate Elasticsearch and SharePoint with BA Insight

SharePoint is nearly ubiquitous in enterprises and has been proven to be a highly effective portal solution with a large support ecosystem. BA Insight makes Elasticsearch appear as a native search service in SharePoint, not as a remote web page or service. Reach broader audiences by allowing SharePoint users to securely consume data from your Elasticsearch cluster.

AutoClassifier
Content Processing with extensible pipelines

Federator
Pluggable query and results pipelines

Search UI

Content → Connectors → Content Processing → Search Index → Query Processing

Analytics

Content

Connectors
Feed content from over 60 systems

Smart Analytics
Behavioral data for insight and learning

A wide range of additional capabilities is added to Elasticsearch when combined with SharePoint and BA Insight:

Connectors: surface a wide range of enterprise data from over 60 systems into your search applications

Item-level security: add item-level security so that users only see what they are authorized for

Auto-Classification: power better aggregations and facets with highly relevant, automatically-generated metadata

Federation: mash-up queries and results and present them cleanly in the SharePoint federation framework

Applications: instantly deploy *Smart Previews*, *Visual Refiners*, *InfoSites* and other applications

Analytics: automatically collect user behavior data and gain insight via Kibana-based dashboards

MODULAR PRODUCT PORTFOLIO
BA Insight products can be used as individual components or applied in combination to create powerful search solutions
