

70+ Indexing Connectors Search All Your Enterprise Systems via O365

Forcing users to seek information from multiple sources is frustrating and decreases productivity. Deliver a unified view through Office 365 and give users secure access to all the information they need.

BA Insight offers 70+ connectors to integrate O365 to other systems, all built on a single connector framework. Support for SharePoint Online, SharePoint on-premise, and hybrid SharePoint gives customers full flexibility in their deployments.

- Connect cloud-based and on-premise systems to O365
- Provide a unified view of information to users
- Make O365 the go to place for finding information as the intranet/enterprise search platform.
- Accelerate adoption of O365

Improve Employee Productivity

- 90% of users find relevant information the first time
- Unified view of information removes the need to look into multiple systems
- Reduce duplication of effort

More efficient organization and better business performance

Reduce Cost and Risk

- Reduce Implementation Time
- Eliminate need for custom code
- Improve IT responsiveness
- Future-Proof your IT Architecture

Increased adoption of the Intranet

Secure Connectivity

- Integrated Security Trimming
- Fully honor source system security
- Manages sophisticated security scenarios across heterogeneous systems

Easy, Secure access to information across many key systems

To see everything light up from all our SharePoint business solutions in one search results page in the cloud is pretty spectacular. Looks like we now have the largest hybrid search index in the world ."

– Kevin Spreadbury, Solutions Architect, Vodafone

BA Insight's Connectors build on Microsoft's Cloud SSA and enable the customer to use O365 as their unified access point for finding information from within and outside O365.

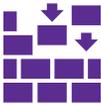

Improved Employee Productivity

- Find rate of over 90%
- Reduced duplication of effort by up to 60%
- Faster time-to-information

Reduced Cost and Risk

- Decreased implementation time of SharePoint portal and intranets by more than 50%.
- Reduced their total cost of ownership by up to 2/3

Secure Connectivity

- Smart Security Mapping provides powerful security integration across the heterogeneous security schemes used by different source systems

BA Insight Connectors

Connectivity without custom code

Key Differentiators:

- High Performance
- Light Touch
- Unparalleled Security
- Ease of Administration
- Flexibility

Eliminate Information Silos

- Increase employee productivity and effectiveness by making it easy to find and explore all your information
- Quickly tap knowledge companywide, resulting in more informed decisions, better M&A Integration, and reduced cost
- Improve customer service through quick and reliable access to needed information

Why BA Insight?

BA Insight's software addresses the Speed to Information challenge organizations face by quickly connecting SharePoint users to the knowledge they need – linking key enterprise systems with an easy-to-implement, use and upgrade software portfolio. It replaces slow, high effort, and expensive customized approaches with easy to use, off-the-shelf software.

Hundreds of organizations and millions of users benefit from BA Insight's software on a daily basis to provide compelling intranets that people love to use.

Unified view across all content

- on-premises and on-line
- inside and outside SharePoint
